<td>Prove theorems about lines and angles; use theorems about lines and angles to solve problems. Theorems include: vertical angles are congruent; when a transversal crosses parallel lines, alternate interior angles are congruent and corresponding angles are congruent; points on a perpendicular bisector of a line segment are exactly those equidistant from the segment's endpoints.</td>
</tr>
</tbody>
</table>

### MAFS.912.G-CO.4.12

Make formal geometric constructions with a variety of tools and methods. Copying a segment; copying an angle; bisecting a segment; bisecting an angle; constructing perpendicular lines, including the perpendicular bisector of a line segment; and constructing a line parallel to a given line through a point not on the line.

- **Topic 9:** Angle-Preserving Transformations
- **Topic 10:** Constructions of Angles, Perpendicular Lines, and Parallel Lines
Chapter 3 – Topic 1
Introduction to Angles – Part 1

Consider the figure of angle $A$ below.

What observations can you make about angle $A$?

How else do you think we can name angle $A$?

Why do you think we draw an arc to show angle $A$?

Like circles, angles are measured in ____________ since they measure the amount of rotation around the center.

Consider the figure below.

Use the figure to answer the following questions.

What is the measure of circle $C$?

What is the measure of $\angle a + \angle b + \angle c$?

How many degrees is half of a circle?

What is the measure of $\angle a + \angle b$?

Two positive angles that form a straight line together are called ________________ angles.

- When added together, the measures of these angles total ____________ degrees, forming a ____________ pair.
Draw an example of **supplementary angles** that form a **linear pair**.

A quarter-circle is a ____________ angle.

How many degrees are in a right angle?

Two positive angles that together form a right angle are called ________________ angles.

Draw an example of **complementary angles**.

---

**Let’s Practice!**

1. In the figure below, \( m\angle a = 7x + 5 \) and \( m\angle b = 28x \). The angles are supplementary.

\[
\angle a \quad \angle b
\]

Find the value of \( x \) and the measure of \( \angle a \) and \( \angle b \) in degrees.

---

**STUDY TIP**

When we refer to the angle as \( \angle ABC \), we mean the actual angle object. If we want to talk about the size or the measure of the angle in degrees, we often write it as \( m\angle ABC \).
2. In the figure below, \( m\angle c = 9x - 3 \) and \( m\angle d = 8x + 9 \).

a. If \( x = 5 \), are \( \angle c \) and \( \angle d \) complementary? Justify your answer.

b. If \( \angle c, \angle d, \) and \( \angle e \) form half a circle, then what is the measure of \( \angle e \) in degrees?

Try It!

3. Angle \( A \) is 20 degrees larger than angle \( B \). If \( A \) and \( B \) are complementary, what is the measure of angle \( A \)?

4. Consider the figure below.

If the angle with value of \( y \) stretches from the positive \( y \)-axis to the ray that makes the 38° angle, set up and solve an appropriate equation for \( x \) and \( y \).
Section 3 – Topic 2
Introduction to Angles – Part 2

Measuring and classifying angles:

➢ We often use a _______________ to measure angles.

To measure an angle, we line up the central mark on the base of the protractor with the vertex of the angle we want to measure.

The Protractor Postulate
The measure of the angle is the absolute value of the difference of the real numbers paired with the sides of the angle, because the parts of angles formed by rays between the sides of a linear pair add to the whole, 180°.

Label and measure the angles in the following figure.
Match each of the following words to the most appropriate figure represented below. Write your answer in the space provided below each figure.

- **Acute**
- **Obtuse**
- **Right**
- **Straight**
- **Reflex**

An angle that measures less than 90° is ____________.

An angle that measures greater than 90° but less than 180° is ____________.

An angle that measures exactly 90° is ____________.

An angle of exactly 180° is ____________.

An angle greater than 180° is called a ____________ angle.

---

**Let's Practice!**

1. Use the figure below to fill in the blanks that define angles \( \angle FGK \), \( \angle FGH \), and \( \angle KGH \) as acute, obtuse, right, or straight.

![Protractor and angles](image)

a. \( \angle FGK \) is a(n) ____________ angle.

b. \( \angle FGH \) is a(n) ____________ angle.

c. \( \angle KGH \) is a(n) ____________ angle.
2. A hockey stick comes into contact with the ice in such a way that the shaft makes an angle with the ice, labeled as angle $B$ in the figure below. The angle between the shaft and the toe of the hockey stick is labeled as $A$.

a. Determine the type of angle that is between the ice and the shaft. Is it acute, right, obtuse, or straight?

b. Determine the type of angle that is between the shaft and the toe. Is it acute, right, obtuse, or straight?

If $\angle B$ and $\angle C$ are complementary, then:

The measure of $\angle A$ is _______

The sum of $m\angle A$ and $m\angle B$ is _______

The sum of $m\angle A$, $m\angle B$, and $m\angle C$ is _______

If $m\angle Z = m\angle A + m\angle C$, then $\angle Z$ is _______

- acute
- obtuse
- right
- straight
Section 3 – Topic 3
Angle Pairs – Part 1

Consider the following figure that presents an *angle pair*.

What common ray do \( \angle BAC \) and \( \angle CAD \) share?

Because these angle pairs share a ray, they are called _____________ angles.

Consider the following figure of *adjacent angles*.

What observations can you make about the figure?

These adjacent angles are called a ____________ pair. Together, the angles form a __________ angle.

What is the measure of a straight angle?

What is the measure of the sum of a *linear pair*?

**Linear Pair Postulate**

If two positive angles form a linear pair, then they are supplementary.

T&AE NOTE!
Postulates & Theorems
Consider the figure below of angle pairs.

What observations can you make about $\angle A$ and $\angle C$?

What observations can you make about $\angle B$ and $\angle D$?

$\angle A$ and $\angle C$ form what we call a pair of _____________ angles.

What angle pairs form a set of vertical angles?

**Vertical Angles Theorem**

If two angles are vertical angles, then they have equal measures.

Consider the figure below.

What observations can you make about the figure?

We call $BM$ an angle bisector.

Make a conjecture as to why $BM$ is called an angle bisector.
Let’s Practice!

1. Consider the figure below.

Complete the following statements:

- ∠1 and ∠4 are ______________ angles.
- ∠1 and ∠2 are ______________ angles.
- ∠3 and ∠4 are ______________ angles and ______________ angles.
- ∠4 and ∠5 are ______________ angles and ______________ angles. They also form a ______________.

2. If ∠ACB and ∠ACE are linear pairs, and \( m\angle ACB = 5x + 25 \) and \( m\angle ACE = 2x + 29 \), then
   
   a. Determine \( m\angle ACB + m\angle ACE \).
   
   b. Determine the measures of \( m\angle ACB \) and \( m\angle ACE \).

3. If ∠MFG and ∠EFN are vertical angles, and \( m\angle MFG = 7x - 18 \) and \( m\angle EFN = 5x + 10 \), then
   
   a. What can we say about ∠MFG and ∠EFN that will help us determine their measures?
   
   b. Determine the measures of ∠MFG and ∠EFN.
Try It!

4. Consider the figure below.

![Diagram with angles labeled]

Angle measures are represented by algebraic expressions. Find the value of $x$, $y$, and $z$.

Consider the figure below.

What can you observe about $\angle A$ and $\angle B$?

**Congruent Complements Theorem**

If $\angle A$ and $\angle B$ are complements of the same angle, then $\angle A$ and $\angle B$ are congruent.
Consider the figures below.

What can you observe about $\angle A$ and $\angle B$?

**Congruent Supplements Theorem**
If $\angle A$ and $\angle B$ are supplements of the same angle, then $\angle A$ and $\angle B$ are congruent.

Consider the figure below.

What can you observe about $\angle B$ and $\angle K$?

**Right Angles Theorem**
All right angles are congruent.

---

**Let's Practice!**

1. The measure of an angle is four times greater than its complement. What is the measure of the larger angle?

**Try It!**

2. $\angle X$ and $\angle Y$ are supplementary. One angle measures 5 times the other angle. What is the complement of the smaller angle?
**Let’s Practice!**

3. Consider the figure below.

![Diagram](image)

**Given:** \(\angle 2\) and \(\angle 3\) are a linear pair.  **Prove:** \(\angle 2 \cong \angle 4\)

\(\angle 3\) and \(\angle 4\) are a linear pair.

Complete reasons 2 and 3 in the chart below.

BEAT THE TEST!

1. \( \angle LMN \) and \( \angle PML \) are linear pairs, \( m \angle LMN = 7x - 3 \) and \( m \angle PML = 13x + 3 \).

   Part A: \( m \angle LMN = \)

   Part B: \( m \angle PML = \)

   Part C: If \( \angle PMR \) and \( \angle LMN \) form a vertical pair and \( m \angle PMR = 5y + 4 \), find the value of \( y \).

2. Consider the figure below.

   \[
   \begin{align*}
   &1 \quad 2 \\
   &3 \quad 4
   \end{align*}
   \]

   Given: \( \angle 1 \) and \( \angle 2 \) form a linear pair.
   \( \angle 1 \) and \( \angle 4 \) form a linear pair.

   Prove: The Vertical Angle Theorem

Use the bank of reasons below to complete the table.

Section 3: Angles
Section 3 – Topic 5  
Special Types of Angle Pairs Formed by Transversals and Non-Parallel Lines

Many geometry problems involve the intersection of three or more lines. 

Consider the figure below.

What observations can you make about the figure?

- Lines $l_1$ and $l_2$ are crossed by line $t$.  
- Line $t$ is called the ____________________, because it intersects two other lines ($l_1$ and $l_2$).  
- The intersection of line $t$ with $l_1$ and $l_2$ forms eight angles.

Identify angles made by transversals.

Consider the figure below. $\angle a$ and $\angle b$ form a linear pair.

Box and name the other linear pairs in the figure.

Consider the figure below. $\angle e$ and $\angle h$ are vertical angles.

Box and name the other pairs of vertical angles in the figure.

Section 3: Angles
Consider the figure below.

Which part of the figure do you think would be considered the interior? Draw a circle around the interior angles in the figure. Justify your answer.

Which part of the figure do you think would be considered the exterior? Draw a box around the exterior angles in the figure. Justify your answer.

Consider the figure below. $\angle d$ and $\angle e$ are alternate interior angles.

- The angles are in the interior region of the lines $l_1$ and $l_2$.
- The angles are on opposite sides of the transversal.

Draw a box around the other pair of alternate interior angles in the figure.
Consider the figure below. \( \angle b \) and \( \angle g \) are **alternate exterior angles**.

\[
\begin{array}{c}
\text{Consider the figure below. } \angle b \text{ and } \angle f \text{ are **corresponding angles**.}
\end{array}
\]

- The angles are in the exterior region of lines \( l_1 \) and \( l_2 \).
- The angles are on opposite sides of the transversal.

Draw a box around the other pair of alternate exterior angles in the figure.

- The angles have distinct vertex points.
- The angles lie on the same side of the transversal.
- One angle is in the interior region of lines \( l_1 \) and \( l_2 \). The other angle is in the exterior region of lines \( l_1 \) and \( l_2 \).

Draw a box around the other pairs of corresponding angles in the figure and name them below.
Consider the figure below. \(\angle c\) and \(\angle e\) are **consecutive** or **same-side interior angles**.

\[ \begin{array}{c}
\text{l}_1 \\
\text{a}\\
\text{b}\\
\text{c}\\
\text{d}\\
\text{e}\\
\text{f}\\
\text{g}\\
\text{h}\\
\text{l}_2
\end{array} \]

- The angles have distinct vertex points.
- The angles lie on the same side of the transversal.
- Both angles are in the interior region of lines \(\text{l}_1\) and \(\text{l}_2\).

**Let's Practice!**

1. On the figure below, Park Ave. and Bay City Rd. are non-parallel lines crossed by transversal Mt. Carmel St.

The city hired GeoNat Road Svc. to plan where certain buildings will be constructed and located on the map.

<table>
<thead>
<tr>
<th>Park</th>
<th>Church</th>
<th>Library</th>
<th>Police Dept.</th>
</tr>
</thead>
<tbody>
<tr>
<td>School</td>
<td>Hospital</td>
<td>Fire Dept.</td>
<td>City Bldg.</td>
</tr>
</tbody>
</table>
Position the buildings on the map by meeting the following conditions:

- The park and the city building form a linear pair.
- The city building and the police department are at vertical angles.
- The police department and the hospital are at alternate interior angles.
- The hospital and the fire department are at consecutive interior angles.
- The school is at a corresponding angle with the park and a consecutive interior angle to the police department.
- The library and the park are at alternate exterior angles.
- The church is at an exterior angle and it forms a linear pair with both the library and the school.

Try It!

2. Consider the figure below.

Which of the following statements is true?

A. If $\angle a$ and $\angle e$ lie on the same side of the transversal and one angle is interior and the other is exterior, then they are corresponding angles.

B. If $\angle b$ and $\angle h$ are on the exterior opposite sides of the transversal, then they are alternate exterior angles.

C. If $\angle b$ and $\angle c$ are adjacent angles lying on the same side of the transversal, then they are same-side/consecutive interior angles.

D. If $\angle b$, $\angle c$, $\angle f$ and $\angle g$ are between the non-parallel lines, then they are interior angles.
Section 3 – Topic 6
Special Types of Angle Pairs Formed by Transversals and Parallel Lines – Part 1

Consider the following figure of a transversal crossing two parallel lines.

Name the acute angles in the above figure.

Name the obtuse angles in the above figure.

Which angles are congruent? Justify your answer.

Which angles are supplementary? Justify your answer.
Consider the following figures of transversal \( t \) crossing parallel lines, \( l_1 \) and \( l_2 \).

Identify a pair of angles that satisfy the **Linear Pair Postulate**. Use the figure above to justify your answer.

Make a list of the interior and the exterior angles. What can you say about these angles?

Identify each of the **alternate interior angles** in the above figures and determine the angles’ measures.

**Alternate Interior Angles Theorem**

If two parallel lines are cut by a transversal, the alternate interior angles are congruent.

**Converse of the Alternate Interior Angles Theorem**

If two lines are cut by a transversal and the alternate interior angles are congruent, the lines are parallel.

Identify each of the **alternate exterior angles** in the above figures and determine the angles’ measures.

**Alternate Exterior Angles Theorem**

If two parallel lines are cut by a transversal, the alternate exterior angles are congruent.

**Converse of the Alternate Exterior Angles Theorem**

If two lines are cut by a transversal and the alternate exterior angles are congruent, the lines are parallel.
Section 3: Angles

Identify the **corresponding angles** in the above figures. What does each angle measure?

**Corresponding Angles Theorem**
If two parallel lines are cut by a transversal, the corresponding angles are congruent.

**Converse of the Corresponding Angles Theorem**
If two lines are cut by a transversal and the corresponding angles are congruent, the lines are parallel.

Identify the **same-side/consecutive angles** in the above figures. What does each angle measure?

**Same-side Consecutive Angles Theorem**
If two parallel lines are cut by a transversal, the interior angles on the same side of the transversal are supplementary.

**Converse of the Same-side Consecutive Angles Theorem**
If two lines are cut by a transversal and the interior angles on the same side of the transversal are supplementary, the lines are parallel.
Let's Practice!

1. Which lines of the following segments are parallel? Circle the appropriate answer, and justify your answer.

   ![Diagram with angles 69° and 111°]

- A $r_1$ and $r_2$
- B $l_1$ and $l_2$
- C $r_1$ and $l_2$
- D $l_1$ and $r_2$

2. Which of the following is a condition for the figure below that will **not** prove $l_1 \parallel l_2$?

   ![Diagram with angles and transversals]

- A $\angle a \cong \angle c$
- B $\angle b + \angle d = 180$
- C $\angle a \cong \angle d$
- D $\angle a + \angle b = 180$

---

Try It!

3. Consider the figure below, where $l_1$ and $l_2$ are parallel and cut by transversals $t_1$ and $t_2$. Find the values of $a, b$ and $v$.

   ![Diagram with angles and transversals]

$\angle t_1 = 62°$, $\angle t_2 = 96°$, $\angle t_1 = 62°$, $\angle t_2 = 96°$, $\angle t_1 = 62°$, $\angle t_2 = 96°$, $\angle t_1 = 62°$, $\angle t_2 = 96°$
Let's Practice!

1. Complete the chart below using the following information.

   Given:
   \( \angle 4 \) and \( \angle 7 \) are supplementary. \( \angle 8 \) and \( \angle 16 \) are congruent.

   Prove: \( l_1 \parallel l_2 \) and \( t_1 \parallel t_2 \)

</tbody>
</table>

What observations can you make about the figure?

A transversal that cuts two parallel lines forming right angles is called a ____________ transversal.

**Section 3 – Topic 8**

**Perpendicular Transversals**

Consider the following figure of a transversal cutting parallel lines \( l_1 \) and \( l_2 \).

**Perpendicular Transversal Theorem**

In a plane, if a line is perpendicular to one of two parallel lines, then it is perpendicular to the other line also.

**Perpendicular Transversal Theorem Corollary**

If two lines are both perpendicular to a transversal, then the lines are parallel.
Consider the figure below. San Pablo Ave. and Santos Blvd. are perpendicular to one another. San Juan Ave. was constructed later and is parallel to San Pablo Ave.

Using the **Perpendicular Transversal Theorem**, what can you conclude about the relationship between San Juan Ave. and Santos Blvd.?

**Let’s Practice!**

1. Consider the following information.

   **Given:** \( p_1 \parallel p_2, p_2 \parallel p_3, l_2 \perp p_1, \) and \( l_1 \perp p_3 \)

   **Prove:** \( l_1 \parallel l_2 \)

Complete the following paragraph proof.

Because it is given that \( p_1 \parallel p_2 \) and \( p_2 \parallel p_3 \), then \( p_1 \parallel p_3 \) by the______________________________.

This means that \( \angle 1 \cong \angle ____ \), because they are corresponding angles.

If \( l_2 \perp p_1 \), then \( m\angle 1 = 90^\circ \). Thus, \( m\angle 2 = \_____________

This means \( p_3 \perp l_2 \), based in the definition of perpendicular lines.

It is given that \( l_1 \perp p_3 \), so \( l_1 \parallel l_2 \), based on the corollary that states ________________________________.
Try It!

2. Consider the lines and the transversal drawn in the coordinate plane below.

a. Prove that $\angle 1 \cong \angle 2$. Justify your work.

b. Prove that $m\angle 1 = m\angle 2 = 90^\circ$. Justify your work.

BEAT THE TEST!

1. Consider the figure to the right, and correct the proof of the Perpendicular Transversal Theorem.

Given: $\angle 1 \cong \angle 4$ and $l_1 \perp t$ at $\angle 2$.
Prove: $l_2 \perp t$

Two of the reasons in the chart below do not correspond to the correct statement. Circle those two reasons.

<table>

</tbody>
</table>
Section 3 – Topic 9
Angle-Preserving Transformations

Consider the figures below. The lines $l_1$ and $l_2$ are parallel, and Figure B is a rotation of Figure A.

The figures above represent an **angle-preserving transformation**.

What do you think it means for something to be an angle-preserving transformation?

Does the transformation preserve parallelism? Justify your answer.

Angle-preserving transformations refer to reflection, translation, rotation and dilation that preserve _______ and _______ after the transformation.

The conditions for parallelism of two lines cut by a transversal are:

- Corresponding angles
- Alternate interior angles
- Alternate exterior angles
- Same-side/consecutive angles are _________

Since the transformations preserve angle measures, these conditions are also preserved. Therefore, parallel lines will remain parallel after any of these four transformations.
Let’s Practice!

1. Consider the figure below in which \( l_1 \parallel l_2 \).

![Diagram of parallel lines with points a, b, c, d, e, f, g, h]

a. Determine the angles that are congruent with \( \angle a \) after a translation of \( \angle a \): ________________

b. Determine the angles that are supplementary with \( \angle a \) and \( \angle e \) after a 180° rotation of \( \angle a \): ________________

Try It!

2. Consider the following figure.

![Figure with points M, N, R, B, A, O, P, R]

a. Reflect the above image across \( y = x \).

b. If \( \angle MOB = 117° \) and \( \angle M'N'P' = 63° \), prove that after the reflection, \( \angle M'O'B' = 117° \).
Let's Practice!

3. The figure in Quadrant III of the coordinate plane below is a transformation of the figure in Quadrant II.

![Figure in Quadrant III](image)

- a. What type of transformation is shown above? Justify your answer.

- b. Write a paragraph proof to prove that $\angle 6$ and $\angle f$ are supplementary.

Try It!

4. The figure in Quadrant IV of the coordinate plane below is a transformation of the figure in Quadrant II.

![Figure in Quadrant IV](image)

- a. What type of transformation is shown above? Justify your answer.

- b. Write a paragraph proof to prove that $\angle 4$ and $\angle e$ are congruent.
5. Consider the figure again and the statements below.

\[ m\angle 2 = 4x - 11 \]
\[ m\angle 4 = 4y + 1 \]
\[ m\angle g = 3x + 3 \]
\[ m\angle h = 13y - 8 \]

Find the following values. Explain how you found the answers.

\[ x = \]
\[ y = \]
\[ m\angle 1 = \]
\[ m\angle d = \]

---

**BEAT THE TEST!**

1. The figure in the second quadrant of the coordinate plane below was transformed into the figure in the first quadrant. Mark the most appropriate answer in each shape below.

Part A: The figure was
- dilated
- rotated
- reflected
- translated

-o across the x-axis
-o across the y-axis
-o around the origin
-o by a scale factor of -1
-o sixteen units to the right

Part B: \( \angle 1 \) is
- complementary to \( \angle c \).
- congruent
- corresponding
- supplementary
Section 3: Angles

Part C: \(\angle 6\) is
- complementary
- congruent
- corresponding
- supplementary

to \(\angle g\).

2. Consider the same figure as in the previous question.

If \(m\angle 7 = 2x - 4\) and \(m\angle b = 6x\), then \(m\angle 8 = \ldots\) and \(m\angle h = \ldots\).

Section 3 – Topic 10
Constructions of Angles, Perpendicular Lines, and Parallel Lines

We are going to learn how to do three constructions in this video.

Copy \(\angle A\):

![Diagram](image)

Step 1. Draw a ray that will become one of the two rays of the new angle. Label the ray \(\overline{DE}\).

Step 2. Place your compass at the vertex of \(\angle A\). Create an arc that intersects both rays of \(\angle A\).

Step 3. Using this same measurement, do the same thing beginning at the endpoint of \(\overline{DE}\).

Step 4. Set your compass to the distance from one of the intersection points of the arc and \(\angle A\). Then, set your compass to the other intersection point of the arc and \(\angle A\).

Step 5. Using the same setting, place the compass on the intersection point of the \(\overline{DE}\) and the arc drawn in step 2. Draw an arc that intersects the other side.

Step 6. This will create two arcs that intersect at a point. Label the point \(F\). Draw the line going from this point to the endpoint of the ray to complete the copy of the angle.
Let's Practice!

1. Construct a line through $P$ perpendicular to the given line segment $\overline{AB}$:

   \begin{align*}
   \text{Step 1.} & \quad \text{Place the point of the compass on point } P, \text{ and draw an arc that crosses } \overline{AB} \text{ twice. Label the two points of intersection } C \text{ and } D.
   \\
   \text{Step 2.} & \quad \text{Place the compass on point } C \text{ and make an arc above } \overline{AB} \text{ that goes through } P, \text{ and a similar arc below } \overline{AB}.
   \\
   \text{Step 3.} & \quad \text{Keeping the compass at the same width as in step 2, place the compass on point } D, \text{ and repeat step 2.}
   \\
   \text{Step 4.} & \quad \text{Draw a point where the arcs drawn in Step 2 and Step 3 intersect. Label that point } R.
   \\
   \text{Step 5.} & \quad \text{Draw a line segment through points } P \text{ and } R, \text{ making } PR \text{ perpendicular to } \overline{AB}.
   \end{align*}

Try It!

2. Construct a line segment through $P$ parallel to the given line segment $\overline{AB}$:

   \begin{align*}
   \text{Step 1.} & \quad \text{Draw a point on } AB \text{ and label the point } C. \text{ Create a ray from point } C \text{ through point } P \text{ to create an angle. Label the angle } \angle R.
   \\
   \text{Step 2.} & \quad \text{Set the width of the compass to about half the distance between } P \text{ and } C, \text{ place the point on } C, \text{ and draw an arc across both lines.}
   \\
   \text{Step 3.} & \quad \text{Using the same setting, place the compass on point } P, \text{ and draw a similar arc to one in step 2.}
   \\
   \text{Step 4.} & \quad \text{Set the width of the compass to the distance where the lower arc crosses the two lines, move the compass to where the upper arc crosses ray } CP \text{ and draw an arc across the upper arc, forming point } Q.
   \\
   \text{Step 5.} & \quad \text{Draw a line segment through points } P \text{ and } Q, \text{ creating line segment } PQ \text{ that is parallel to } \overline{AB}.
   \\
   \text{Which theorem relating to parallel lines can we use to prove that our construction is correct?} \quad \underline{\text{______________________________}}
   \end{align*}
BEAT THE TEST!

1. Consider the figure below.

Celine attempted to construct a line through point \( R \) that is perpendicular to line. In which step did she make a mistake? Mark the most appropriate answer below. Justify your answer.

A Step 1

B Step 2

C Step 3

D All the steps are correct. She did not make a mistake.
